

Rodent Cardiovascular Telemetry

Radio-Telemetry Monitoring of Blood Pressure, Heart Rate, ECG, Temperature, Activity

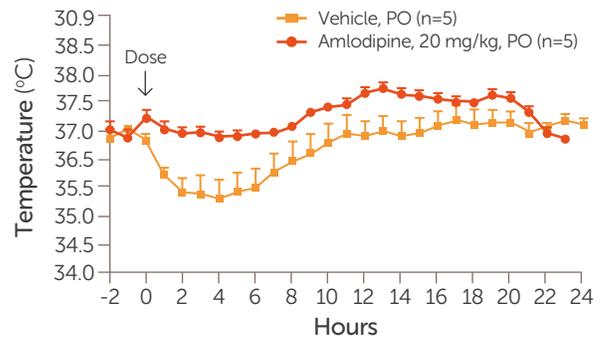

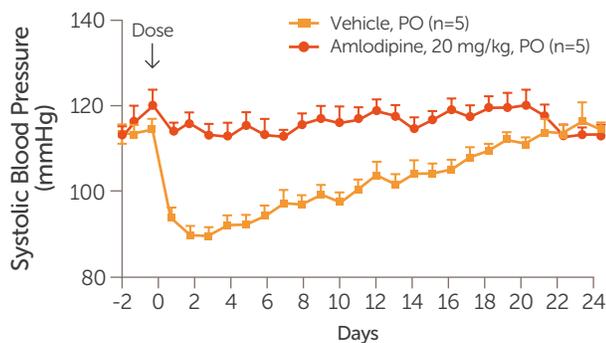

Inotiv offers a customizable radio-telemetry platform for physiological measurements in freely moving rodents as a key analysis tool during preclinical drug discovery pharmacology, disease efficacy, and safety assessment studies.

- Surgically implanted radio-telemetry transmitters, for comprehensive profiling of cardiovascular and physiological parameters.
- Assessment of Blood Pressure, Heart Rate, ECG, Body Temperature, and Activity.
- Precise data acquisition and analysis with DSI Ponemah® Software.
- Flexible and customized study design with continuous data collection:
 - Rats: up to 6 months and 120 animals
 - Mice: up to 6 weeks and 60 animals

Diurnal Variation of Blood Pressure and Heart Rate in C57BL/6 Mice

Blood Pressure & Temperature Reduction in Sprague Dawley Rats
