

ABOUT

Maria Bates, DVM, DACVP

Associate Director Toxicologic Pathology

Maria Bates joined Inotiv in October 2016 as a veterinary anatomic study pathologist. As part of her current role, she manages our toxicologic pathology group. In addition to evaluating GLP and non-GLP toxicology studies, she has expertise in evaluating cardiovascular, pulmonary, and hepatic disease models in addition to liver-humanized chimeric mouse models.

With over 20 years of experience, Dr. Bates is an expert both in comparative pathology and animal care. She is an alumnus of the University of Illinois at Urbana –Champaign where she earned her DVM. Following a decade as a practicing small animal clinical veterinarian, Maria completed her residency while earning a master's degree in veterinary pathology. Working as a small animal veterinarian she developed a strong ability to multitask, prioritize, and triage and with her prior experience in animal research and toxicology, it made moving into a histopathology position at Seventh Wave (now Inotiv) an easy choice.

As part of our pathology team, Maria brings a well-rounded histology, veterinary, and pathology experience to meet our clients' needs.

~20 Years of Experience

Areas of Expertise

- > Development and Reproductive Toxicology
- > Chimeric Mouse Models
- > Pulmonary Fibrosis
- > Pulmonary Hypertension
- > NASH
- > Image Analysis
- > Safety Assessment Non-GLP/GLP
